

IN THE SPECIFICATION:

Please amend the specification as follows:

Pursuant to 37 CFR § 1.121(b)(1)(iii), a marked up copy of each paragraph amended below appears on the page immediately following each amendment.

Please delete page 1, line 11 to page 1, line 15, and insert the following therefor:

-- BACKGROUND

The disclosure relates generally to a computing system and more particularly to a mobile computing system integrating a removable personal digital assistant (PDA) system with a personal computer (PC) system. --

Please delete page 4, line 1 to page 4, line 5, and insert the following therefor:

-- The aforementioned and other features are accomplished, according to the present disclosure, by providing a mobile computing architecture that includes a PC system and a PDA system integrated into a single computer architecture. Either the PC system or the PDA system can control a common display and input output devices. --

Please delete page 5, line 2 to page 5, line 5, and insert the following therefor:

-- The present disclosure may be better understood, and it's numerous objects, features and advantages made apparent to those skilled in the art by referencing the accompanying drawings. The use of the same reference number throughout the Figures designates a like or similar element. --

Please delete page 5, line 16 to page 5, line 21, and insert the following therefor:

A4 -- While the disclosure is susceptible to various modifications and alternative forms, specific embodiments thereof are shown by way of example in the drawings and will herein be described in detail, it should be understood, however, that the drawings and detailed description thereto are not intended to limit the disclosure to the particular form disclosed but on the contrary, the intention is to cover all modifications, equivalents, and alternatives falling within the spirit and scope of the present disclosure as defined by the appended claims. --

Please delete page 7, line 18 to page 7, line 22, and insert the following therefor:

A5 -- Now referring to Figure 4B, illustrated is a block diagram of an alternative embodiment of a removable PDA system. An integrated video controller 476 is designed into the co-processor 405 with video data sent along video bus 480. A general purpose input output control switch 485 passes the video signals to the display if the PDA is in independent stand alone operation. --

Page 8, line 18 to page 8, line 31.

A6 -- The embodiment illustrated in Figure 6 provides the following method of operation. When the top cover 610 is closed, the PC system is turned off, deactivated, or suspended. Control can be passed to the PDA 605. Because the PDA 605 resides on the top cover 610, a user is able to have use of the PDA 605. Because the PDA 605 is connected to the computer architecture, the computer architecture continues to provide power to the PDA 605 using the larger capacity system battery found in the computer architecture as opposed to the lower life battery that is contained in the PDA 605. Interface to the PDA 605 is made available to the user through access to a display 630 that can include an IO touch screen, IO

Ab
buttons 635. Antenna 640 may also be extended to provide wireless communications.

Although the present disclosure has been described in connection with several embodiments, the disclosure is not intended to be limited to the specific forms set forth herein, but on the contrary, it is intended to cover such alternatives, modifications, and equivalents as can be reasonably included within the spirit and scope of the disclosure as defined by the appended claims. --
